## Amendments To The Claims

DEC 0 7 2007

The listing of claims presented below will replace all prior versions, and listings, of claims in the application.

## Listing of claims:

1. (currently amended) A method for generating a search result list in response to a search request input from a searcher through a communication network, comprising the steps of:

determining the lowest limit bidding price for each of a plurality of keywords keyword, the lowest limit bidding price being determined in consideration of at least one of a number of page views for each keyword, a basic unit price per one page view and a weight associated with a preference for the each keyword;

receiving bidding prices higher than or equal to the lowest limit bidding price and tender conditions including the keyword keywords and a predetermined search listing display method for a search listing methods from each of a plurality of network information providers; and

<u>determining making a successful bid bids of the network information</u>

<u>providers</u> for the <u>keywords-keyword</u> based on the tender conditions and the bidding prices, to sell <u>a the-keywords keyword good</u> associated with the predetermined search listing display <u>method methods</u>-through a tender;

associating at least one portion of the search listings with the keywords

keyword and the predetermined search listing display methods, to maintain a database including a plurality of search listings;

PATENT Docket No. CU-4238

receiving a search request from a searcher;

identifying search listings associated with keywords corresponding to the search request;

arranging said at least one portion of the search listings according to the predetermined search listing display methods of the successful bids when arranging the identified search listings; and

generating the search result list including the arranged at least one portion of the search listings.

- 2. (previously presented) The method as claimed in claim 1, wherein the predetermined search listing display methods are specified by a form of display and ranking of the search listings.
- 3. (previously presented) The method as claimed in claim 1, wherein said at least one portion of the search listings is randomly arranged in a placement zone specified by the search listing display method when arranging said at least one portion of the search listings.
- 4. (original) The method as claimed in claim 1, wherein predetermined keywords are sold during only a predetermined period of time through the tender.
- 5. (previously presented) The method as claimed in claim 1, wherein the step of

PATENT Docket No. CU-4238

selling the keywords through the tender is individually performed for each of said at least one portion of the search listings.

- 6. (previously presented) The method as claimed in claim 1, wherein remaining search listings except said at least one portion of the search listings are arranged independent of the predetermined search listing display method.
- 7. (original) The method as claimed in claim 1, wherein the keywords sold through the tender are premium keywords determined by a predetermined criterion.
- 8. (original) The method as claimed in claim 1, wherein the tender conditions selectively further include information on network information providers or a predetermined display period of time.
- 9. (currently amended) A method for generating a search result list in response to a search request input from a searcher through a communication network, comprising the steps of:

maintaining a plurality of search listings including URLs associated with network information providers;

determining the lowest limit bidding price for each keyword, the lowest limit bidding price being determined in consideration of at least one of a number of page views for each keyword, a basic unit price per one page view and a weight associated

PATENT Docket No. CU-4238

with a preference for the each keyword;

receiving keywords associated with the search listings and bidding prices associated with the keywords from the network information providers, the bidding prices being higher than or equal to the lowest limit bidding price;

selecting a successful bidder among a plurality of network information providers associated with the keywords according to a predetermined criterion associated with the bidding prices after a tender period of time expires, wherein the tender period of time is a period of time in which the bidding prices are accepted; and

generating a search result list including at least a portion of the plurality of search listings in response to the search request,

wherein at least one portion of the plurality of search listings is arranged in a predetermined search listing placement position.

- 10. (previously presented) The method as claimed in claim 9, wherein the search listing placement position is determined before the bidding prices are received from the network information providers.
- 11. (previously presented) The method as claimed in claim 10, further comprising the step of receiving information on a predetermined display period of time from the network information providers,

wherein when the network information providers are selected as a successful bidder, search listings associated with the network information providers are arranged

PATENT Docket No. CU-4238

in the predetermined search listing placement position during the predetermined display period of time, and a position of the arranged search listings is not changed.

12. (previously presented) The method as claimed in claim 9, wherein the step of selecting the successful bidder includes selecting a plurality of the network information providers as successful bidders,

wherein said at least one portion of the search listings is arranged according to rankings determined by the bidding prices of the successful bidders within a placement zone specified by the search listing display methods.

- 13. (original) The method as claimed in claim 9, further comprising the steps of: offering instant purchase prices to network information providers; and instantly selecting the network information providers as successful bidders if the instant purchase prices are received as the bidding prices from network information providers.
- 14. (original) The method as claimed in claim 13, wherein the instant purchase prices are determined in consideration of past successful bid prices of the keywords.
- 15. (original) The method as claimed in claim 9, wherein the step of selecting the successful bidder further includes the step of regarding a successful bid as an unsuccessful bid in at least one of the followings:

PATENT Docket No. CU-4238

a case where a purchase rejection intention is received from the successful bidder.

a case where the successful bidder does not purchase a successful bidden keyword within a predetermined period of time, and

a case where a purchase rejection intention is once again received after the predetermined period of time expires.

16. (original) The method as claimed in claim 15, further comprising the step of reselling keywords if the successful bid is regarded as an unsuccessful bid,

wherein the step of reselling the keywords includes one of a first-come firstserved system, a re-tender system and a next order bidding price selection system.

- 17. (original) The method as claimed in claim 9, wherein if a plurality of same bidding prices are received, the successful bidder is selected in consideration of at least one of a tender sequence, a display period of time, an actual advertisement use result, a credit of network information providers.
- 18. (cancelled)
- 19. (original) The method as claimed in claim 9, further comprising the step of opening the highest bidding price or a bidding price list.

PATENT Docket No. CU-4238

- 20. (original) The method as claimed in claim 19, wherein the highest bidding price or the bidding price list is not opened during a predetermined period of time before a tender period of time expires.
- 21. (original) The method as claimed in claim 9, further comprising the step of offering keywords similar to keywords received from the network information providers to the network information providers.
- 22. (original) The method as claimed in claim 9, wherein the step of receiving the bidding prices includes the step of limiting the number of receipt of bidding prices from same network information providers to the predetermined number of times or demanding an additional price if bidding prices are received above the predetermined number of times.
- 23. (original) The method as claimed in claim 9, further comprising the step of offering a result for the search request associated with the keywords to the successful bidder,

wherein the result for the search request includes at least one of the number of exposures, the number of clicks and a click rate.

24. (previously presented) The method as claimed in claim 9, wherein the step of maintaining the plurality of search listings includes the step of maintaining search

PATENT Docket No. CU-4238

listings including URLs associated with network information providers and image files associated with the network information providers.

- 25. (previously presented) The method as claimed in claim 24, wherein at least one portion of the search listings arranged in the predetermined search listing placement position is arranged with the image files included.
- 26. (currently amended) A method for generating a search result list in response to a search request input from a searcher through a communication network, comprising the steps of:

determining the lowest limit bidding price for each keyword, the lowest limit bidding price being determined in consideration of at least one of a number of page views for each keyword, a basic unit price per one page view and a weight associated with a preference for the each keyword;

receiving web page titles, web page descriptions, image files, keywords and bidding prices associated with web pages of the network information providers from network information providers, the bidding prices being higher than or equal to the lowest limit bidding price;

generating search listings in real time substantially by combining the web page titles, the web page descriptions and the image files, and offering the generated search listings to the network information providers;

receiving confirmation inputs of the network information providers for the

Page 9 of 27

PATENT Docket No. CU-4238

generated search listings;

selecting a successful bidder among a plurality of network information providers

that provided confirmation inputs, associated with the keywords wherein the

successful bidder is selected according to a predetermined criterion associated with
the bidding prices;

associating the keywords with the search listings of the successful bidders; receiving a search request from the searcher;

identifying search listings associated with a keyword corresponding to the search request; and

offering the identified search listings to the searcher by arranging the identified search listings in a predetermined position of a search result web page.

27. (previously presented) The method as claimed in claim 26, further comprising the steps of:

receiving a correction request for one or more of web page titles, web page descriptions and image files from the network information providers; and

correcting the search listings in real time substantially in response to the correction request and offering the corrected search listings to the network information providers.

28. (currently amended) A method for generating a search result list in response to a search request input from a searcher through a communication network, comprising

PATENT Docket No. CU-4238

the steps of:

determining the lowest limit bidding price for each keyword, the lowest limit bidding price being determined in consideration of at least one of a number of page views for each keyword, a basic unit price per one page view and a weight associated with a preference for the each keyword;

receiving keywords and bidding prices from network information providers, the bidding prices being higher than or equal to the lowest limit bidding price;

selecting a successful bidder among a plurality of network information providers associated with the keywords, wherein the successful bidder is selected according to a predetermined criterion associated with the bidding prices;

receiving a web page title, a web page description and an image file associated with a web page of the successful bidder from the successful bidder;

generating <u>a</u> search <u>listing</u> listings in real time substantially by combining the web page title, the web page description and the image file, and offering the generated search listings to the successful bidder;

receiving a confirmation input of the successful bidder for the generated search listing listings;

associating the keywords with <u>a plurality of the confirmed</u> search listings; receiving a search request from the searcher;

identifying search listings associated with a keyword corresponding to the search request; and

offering the identified search listings to the searcher by arranging the identified

PATENT Docket No. CU-4238

search listings in a predetermined position of a search result web page.

29. (previously presented) The method as claimed in claim 28, further comprising the steps of:

receiving a correction request for one or more of a web page title, a web page description and an image file from the successful bidder; and

correcting the search listings in real time substantially in response to the correction request and offering the corrected search listings to the successful bidder.

30. (previously presented) A system for generating a search result list in response to a search request Input from a searcher through a communication network, comprising:

a tender conditions receiving unit for receiving tender conditions including keywords and search listing display methods, and bidding prices higher than or equal to the lowest limit bidding price from network information providers, the lowest limit bidding price being determined for each keyword and determined in consideration of at least one of a number of page views for each keyword, a basic unit price per one page view and a weight associated with a preference for the each keyword;

a successful bid making unit for making a successful bid for the keywords based on the tender conditions and the bidding prices;

- a storing unit including a plurality of search listings;
- a search performing unit for:

associating the plurality of the search listings with the successfully bidden

Page 12 of 27

PATENT Docket No. CU-4238

keywords and search listing display methods;

identifying search listings having the keywords corresponding to the search request in response to a search request received from a searcher; and arranging at least one portion of the search listings according to the search listing display methods; and

a search request receiving unit for receiving a search request from a searcher via a communication network.

31. (previously presented) A computer-readable recording medium in which a program for implementing a method according to claim 1 in a computer is recorded.
